Unit 3

TR: 11

3. Listen to the information about humpback whales. Then read the sentences and check **T** for *True* or **F** for *False.*

Humpback whales belong to the baleen whale group. Baleen is a type of filter that these whales have in their mouths instead of teeth. Humpbacks hunt in collective groups called pods, and blow bubbles to circle and trap their potential meal—schools of small fish and krill. They usually feed in arctic waters near the North Pole or South Pole. Then they migrate to warmer tropical waters in order to mate.

Humpback whales are known for a behavior called breaching. Breaching is a coordinated movement when whales jump high out of the water and slap their fins to make sounds. Crowds of people like to watch humpbacks breach and play.

Humpbacks are also known for an efficient system of communication called “singing.” Scientists haven’t yet reached a consensus on the meaning of the singing, but they believe that only male humpbacks make singing sounds. Scientists assume that singing is used to attract potential partners, but they need to do more research. They realize there’s still a lot to learn about these beautiful mammals.
